

## Configuring PedCath ICD-10 Codes

You can configure which version(s) of the ICD codes are available for PedCath users in the Billing Codes module, by configuring a few settings within the Administrative Options.

You have the option to make ICD-9 codes available, ICD-10, or both (and if both you can specify what set will be initially shown to the user by default when they enter the billing module). This will give you control over the timing of the ICD-10 switch and allow you to have a transition period if desired where both sets are available. You can modify those options at any time.

To configure those options, from the PedCath main Browse screen :

- Choose **Tools > Options...** from the main menu.
- Click the **Administrator** tab
- Click the **Bill Codes** panel link

## Billing Code Module

The Billing module can be loaded while on the Edit Cath screen by choosing Tools > Patient Billing Information from the main menu.

If both ICD-9 and ICD-10 codes are made available, you will see a drop-down combo box allowing you to choose what sets are displayed in the code set tree view. Procedure codes (CPT) will always be displayed.

The selected cath billing codes now will display a set name (CPT, ICD-9, ICD-10) for each code on the Billing code screen and the printout. So when viewing older cases, any chosen ICD-9 codes will be marked as such. PedCath will not prevent you from adding a combination of ICD-9 and ICD-10 codes, and you are free to changeover codes from older cases to the new coding system, if desired.

The search features (search by code and search by name), will return only items listed in the coding tree view.

The screenshot shows the 'Patient Billing Information' window. It features a table of codes for a specific catheterization, search fields for code and name, and a tree view of code sets.

Set	Code	Description	No
CPT	93451	Catheterization, Right Heart includin	1
CPT	93503	Insertion of Swan-Ganz	1
ICD-9	426.6	SA Block	1
ICD-10	I10	Essential (primary) hypertension	1

Search by Code: 426.10 [Add]

Search By Name: [Add]

Choose Code set: CPT/ICD-10

- Invasive Cardiology [0]
- Diagnostic Codes (ICD-10) [0]
